

Your new Umps Pendant

Pair your pendant to your Hub

Your new pendant needs to be paired to your Hub before it will work. It takes about ten seconds, and anyone can do it.

1 **Activate pairing mode**

Press the Notification Button on your Hub four times. Your Hub will tell you it is in pairing mode

2 **Press your new pendant**

Press the button on your new pendant once. Your Pendant will flash, and your Hub will announce “Pendant Paired” once the button has successfully paired.

Testing your new Pendant Button

It is important you test your new Pendant Button after pairing. You can do this by pressing it once. Your Pendant Button should light up, and your Hub activate an alert. If the Pendant Button does not activate, please contact Umps for support.

Disposing of your old Pendant Button

Your old Pendant Button has a sealed battery inside it, so please don't put it in your household rubbish or recycling bin. Take it to a battery or e-waste recycling drop-off instead. Your local council can tell you where your nearest one is.
